

VENDOR MANAGEMENT

- Vendor evaluation
- Certificate administration
- Contract monitoring
- Portal / web access

Evaluate your vendors regularly and flexibly in SAP with the click of a button

Benchmarking documents the performance of the vendor and provides for a permanent and revision-safe archiving in your SAP system. The integrated **KONZMANN Vendor Management** add-in enables a consolidated overview of soft and hard facts in detail down to a breakdown at material level. Specify the user group according to the roll principal. Benchmark your vendors with freely definable soft and hard facts in your personalized hierarchy direct in SAP. Define your own result lists and evaluation categories. Engage all involved parties (departments, vendors etc) in the communication and evaluation.

Administrate the certificates for your vendors, or else for you materials

Maintain and check the vendor certificates for validity in your SAP system. Specify the authorized certificate types or let the vendor maintain their own certificate updates. Internal certificate approval.

Supervision of contracts

Monitor vendor contracts according to validity dates, quantities ordered to date for quantity contracts or values ordered to date according to value contracts. Inform your buyers early per email regarding contracts due for renewal.

Allow your vendors to participate in the process! Inform them!

Through the Konzmann portal, vendors can register according to your required fields and participate actively in the process. Confidential data and evaluation results can be maintained as "viewing only allowed" or fully hidden.

The portal function enables secure access to your SAP system e.g. for vendors as well as customers and employees via internet – without an additional platform. The „external users“ need only a web-browser. You only need your SAP basic system. Almost any SAP transaction can be made available via Internet.

- ✓ Fast, transparent collaboration with vendors accelerates the procurement processes
- ✓ Favourable software acquisition and maintenance costs
- ✓ Modification free ABAP coding in own worldwide reserved namespace in SAP. Compatible from SAP release 4.6c and upwards
- ✓ Implementation per transport directly in your SAP System

KONZMANN optimises your purchasing processes and applications directly in your SAP® system.

All Add-In products are ABAP coded and seamlessly fit into your system.
